

DIFFERENTIATING WITH THINGLINK

URL: <https://www.thinglink.com/scene/941370751737397249>

INTRODUCTION

5th grade	Science	Habitats
-----------	---------	----------

Teachers must ensure we are offering styles that suit our students' preferences. Not only does it mean that students should receive input in different ways, but they should **show learning in different ways**. Particularly, this project pays special attention to the way the students are going to produce the output. Technology makes this task easier as it offers a large amount of varied resources that can match every child's readiness level, interest and learning style.

DESCRIPTION

The thinglink includes a series of activities classified into four different colours in terms of the skill they focus on:

- Phonetics
- Reading
- Writing
- Listening

Each activity is worth 50, 100 or 200 points, depending on the cognitive skills students have to put into practice.

Students can choose the way they are going to show their learning, as long as

- they achieve, at least 400 points, and
- they carry out, at least, one activity of each category.
